

Answer any 4 of the following questions (each 25%):

1. With a diagram, give an account of the anatomy of the human skin. Outline the kinds of function loss if the skin is damaged.
2. What are the major organs associated with the right upper quadrant of the abdominal area? Where would the related visceral pains be referred to and why?
3. With a diagram, give a general account of the anatomy of the ear. What are the functional losses if part of it is damaged?
4. With a diagram, give an account of the anatomy of the knee joint. What are the common causes of its damage and what are the reactions to its damage?
5. With a diagram, describe all the functional elements in a skeletal muscle. What could go wrong that results in muscle weakness?
