

國立中央大學97學年度碩士班考試入學試題卷

所別：水文與海洋科學研究所碩士班

科目：應用數學 共 1 頁 第 1 頁

*請在試卷答案卷（卡）內作答

1. Calculate the curl of each of the following vector functions \mathbf{F} :

(a) [5%] $\mathbf{F} = \hat{i}z^2 + \hat{j}x^2 - \hat{k}y^2$

(b) [5%] $\mathbf{F} = (\hat{i}x + \hat{j}y + \hat{k}z)/(\hat{x}^2 + \hat{y}^2 + \hat{z}^2)^{3/2}, \quad (x, y, z) \neq (0, 0, 0)$

2. Consider the surface S defined by

$$\begin{aligned} x &= (a + b \cos \phi) \cos \theta \\ y &= (a + b \cos \phi) \sin \theta \quad \text{for} \quad \begin{cases} 0 \leq \theta \leq 2\pi \\ 0 \leq \phi \leq \pi \end{cases} \\ z &= b \sin \phi \end{aligned}$$

where a and b are constants such that $0 < b < a$.

- (a) [10%] Find the two tangent vector to the surface, \bar{b}_θ and \bar{b}_ϕ ,

in terms of θ and ϕ .

- (b) [10%] Find the unit normal vector \hat{n} to the surface S .

- (c) [10%] Calculate the value of the surface integral $\iint_S \bar{F} \cdot \hat{n} dA$

for the vector field $\bar{F} = z\hat{k}$.

3. Solve the following ordinary differential equations for $y = y(x)$:

(a) [10%] $(1+x^2)\frac{dy}{dx} + 4xy = x$, and $y(1) = \frac{1}{4}$.

(b) [10%] $x^2 \frac{d^2y}{dx^2} - x \frac{dy}{dx} - 2y = 0$, and $y(1) = 0, \frac{dy(1)}{dx} = 1$.

4. [20%] Use the method of variation of parameter to find the general

solution $y(x)$ for $\frac{d^2y}{dx^2} + y = \sec x, -\frac{\pi}{2} < x < \frac{\pi}{2}$.

5. [20%] For the matrix $\mathbf{A} = \begin{bmatrix} 1 & -1 & 4 \\ 3 & 2 & -1 \\ 2 & 1 & -1 \end{bmatrix}$, find the eigenvalues and the

corresponding eigenvectors of the matrix \mathbf{A} .
