Please answer each of the following problems with *explanation / calculating process* to obtain the scores.

## I. MULTIPLE CHOICE. Choose the best one and explain why.(合計15%)

- 1) Which of the following is not an element of descriptive statistical problems? (5%)
- A) predictions are made about a larger set of data
  - B) information revealed in a data set is summarized
  - C) identification of patterns in a data set
  - D) graphical and numerical methods
- 2) Suppose NTPU students' ages follow a skewed right distribution with  $\mu = 20$  and  $\sigma = 2$  years old. If we randomly sampled 150 students, which of the following statements about the sampling distribution of the sample mean age is incorrect? (5%)
- A) The mean of the sampling distribution is approximately 20 years old.
  - B) The standard deviation of the sampling distribution is equal to 2 years old.
  - C) The shape of the sampling distribution is approximately normal.
  - D) All of the above statements are correct.
- 3) The academic advisor wants to predict the typical starting salary of a graduate at a top business school using GMAT score of the school as a predictor variable. A simple linear regression of SALARY versus GMAT using the 25 data points in the table are shown below.

---

$$\hat{\beta}_0 = -92040 \quad \hat{\beta}_1 = 228 \quad s = 3213 \quad R^2 = .66 \quad r = .81 \quad df = 23 \quad t = 6.67$$

---

- a. For the situation above, which of the following is *not* an assumption required for the simple linear regression analysis to be valid? (5%)
- A) The errors of predicting SALARY are normally distributed.
  - B) The errors of predicting SALARY have a mean of 0.
  - C) SALARY is independent of GMAT.
  - D) The errors of predicting SALARY have a variance that is constant for any given value of GMAT.
  - E) The Method of Least Squares specifies that the regression line has an average error of 0 and has an SSE that is minimized.

## II. SHORT ANSWER. (合計85%)

For the situation as above in 3),

- b. Write the equation of the probabilistic model of interest, and the least squares line. (5%)
- c. Give a practical interpretation of  $\hat{\beta}_0$ , and  $\hat{\beta}_1$ . (4%)
- d. Give a practical interpretation of  $R^2$ ,  $r$  and  $t$ . (6%)

第2頁 共5頁

可 不可使用計算機

4) Summary information is given for the weights (in pounds) of 1000 randomly sampled trucks that were traveling on Federal highways in 2003. (15%)

MIN: 4001                      25%: 5601

MAX: 10,601                    75%: 8601

AVE: 7001                      Std. Dev.: 1400

- Construct a box plot for the data (including inner and outer fences).
- Comment on a truck weight of 17700 by box plot and z-score.

5) 某人欲知 A、B 兩種肥料的效果是否一樣，他將用兩種肥料所灌溉的番茄各採 41 個，量其重量，得結果如下：

	樣本數	平均重量	樣本標準差
A 肥料	41	80	5
B 肥料	41	76	4

在顯著水準 5% 之下，檢定兩種肥料的效果是否一樣 (25%) ?

6) 一項對於總統候選人支持度最新民意調查如下： (30%)

候選人	受訪選民	選民支持此候選人
A	400	192
B	450	225

請以 95 % 之信心，檢定是否受訪選民對於兩位候選人之喜好有顯著差異。

- 試述虛無及對立假設。
- 使用一般假設檢定。
- 以區間估計檢定。
- 使用  $p$ -值檢定。
- 何謂 95 % 之信心？
- 若希望抽樣誤差不超過 4%，應該還要增加抽取多少樣本？
