

逢甲大學104學年度碩士班考試入學試題

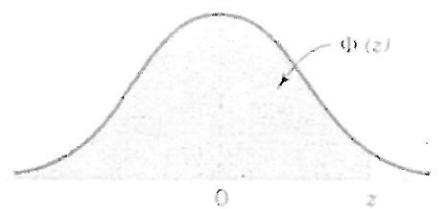

編號：001 科目代碼：201

科目	統計學	適用系所	工業工程與系統管理學系A組、B組	時間	100分鐘
----	-----	------	------------------	----	-------

※請務必在答案卷作答區內作答。 共 2 頁第 | 頁

1. Let the number of flight arrivals per hour at the CCK airport be a random variable x and the number at the TPE airport be another random variable y . Also, $E[x] = 5$, $V[x] = 8$, $E[y] = 10$, and $V[y] = 18$. The variables x and y are independent.
 - (1) Find $E[x-y]$ and $E[3x-2y]$. (10%)
 - (2) Find $V[x-y]$ and $V[10-2x]$. (10%)
2. Assume that a bank knows from past experience that between 10 and 11 a.m. of each day, the mean arrival rate is $\lambda = 60$ customers per hour.
 - (1) What is the probability that exactly two customers will arrive in a given one-minute time interval between 10 and 11 a.m.? (10%)
 - (2) What is the probability that there are more than three customers will arrive in a given one-minute time interval between 10 and 11 a.m.? (10%)
3. One-fourth of the customers entering a local supermarket are less than 25 years old. One percent of the customers less than 25 years old make a major purchase (over \$3000), and 5% of the customers 25 or older make a major purchase. What is the probability that if a major purchase is made, it was by a person 25 or older? (10%)
4. Past experience has indicated that the pull-off force of an adhesive used in manufacturing a connector for a motorcycle engine application is normally distributed and $\sigma = 16$ N. A random sample of sixteen specimens is tested, and the average pull-off force is found to be 400 N and the standard deviation is 9 N.
 - (1) Test the hypothesis that mean pull-off force is 410 N. Use $\alpha = 0.05$. (10%)
 - (2) What is the P -value for the test in part (1)? (5%)
 - (3) If the type II error for the test in part (1) is 0.119, what values could the true mean be? (10%)
 - (4) Explain how you could answer the question in part (1) with a confidence interval on mean pull-off force? (10%)
5. Let X_1, X_2, \dots, X_n be a random sample of size n from a population with mean μ and variance σ^2 .
 - (1) Show that \bar{X}^2 is a biased estimator of μ^2 . (12%)
 - (2) Find the amount of bias in this estimator. (3%)
