答題時，每題都必須寫下題號與詳細步驟。請依題號順序作答，不會作答題目請寫下題號並留空白。

1. Consider the following two groups of students: Group 1 consists of students who spend less than \$1000 per week on food; Group 2 comprises students who spend over \$3000 per week on food. Let p_1 and p_2 equal the proportions of students in these two groups, respectively, who believe that food is expensive. If 1615 out of a random sample of 2020 students from group 1 and 182 out of random sample 303 from group 2 believe that food is expensive.

(a)(10%) Give a point estimate of $p_1 - p_2$.

(b)(10%) Find an approximate 90% confidence interval for $p_1 - p_2$.

2. Let X_1, X_2, \dots, X_n be a random sample of size n from the distribution with the probability density function $f(x|\theta) = \frac{1}{\theta}x^{(1-\theta)/\theta}$, $0 < x < 1$ and $1 < \theta < \infty$.

(a)(10%) Find the maximum likelihood estimator (MLE) of θ^2 .

(b)(10%) Is the MLE of θ^2 unbiased? Why?

(c)(10%) Find the Rao-Cramér lower bound for the variance of an unbiased estimator of θ .

3. Let X follow the normal distribution with mean μ and variance 144. To test $H_0 : \mu = 70$ vs. $H_1 : \mu > 70$, let the critical region be defined by $C = \{(x_1, x_2, \dots, x_{36}) : \bar{x} \geq 73\}$, where \bar{x} is the sample mean of a random sample of size $n = 36$ from this distribution.

(a) (10%) What is the power function of μ for this test.

(b) (10%) If $\bar{x} = 73.41$, find the p -value.

4. (10%) Let $\{A_n\}$ be a sequence of events. Show that if $P(A_n) = 1$ for all $n = 1, 2, \dots$, then $P(\bigcap_{n=1}^{\infty} A_n) = 1$.

5. (10%) Let X_1, X_2, \dots, X_n be independent random variables with $\Pr(X_i = 1) = p = 1 - \Pr(X_i = 0)$. Let $Y_n = \sum_{i=1}^n X_i$ and $P_n = \Pr(Y_n \text{ is not an odd number})$. Show that

$$P_n - P_{n-1} = p(1 - 2P_{n-1}), \quad n \geq 1.$$

6. (10%) Assume that X is a positive continuous random variable having a nonincreasing probability density function $f(x)$, $x > 0$. Show that

$$x^2 f(x) \leq 2E(X), \quad x > 0.$$
