

國立臺灣師範大學 114 學年度碩士班招生考試試題

科目：英文作文

適用系所：英語學系

注意：1. 本試題共 1 頁，請依序在答案卷上作答，並標明題號，不必抄題。2. 答案必須寫在指定作答區內，否則依規定扣分。

“The limits of my language mean the limits of my world,” wrote Austrian philosopher Ludwig Wittgenstein in *Tractatus Logico-Philosophicus* (1922). Language proficiency has long been considered a key determinant of the depth and breadth of one’s life experience, and learning and refining language skills have been lifelong pursuits for many. However, developments in artificial intelligence (AI), particularly in large language models like ChatGPT, have transformed how language is commonly used and understood. Today, AI tools can write essays, translate texts, and even compose poetry. This not only challenges traditional notions of human creativity and communication but also gives rise to an important question: is there still value for humans to dedicate years to learning languages?

On a deeper level, when AI systems can produce coherent, nuanced, and context-aware responses, one must ask: in what ways does human language differ from AI-generated language? To what extent might human language hold more value than its AI-generated counterpart? Perhaps most critically, will AI remain a tool to expand human horizons, or will it begin to supplant humans in thinking and communicating?

Write a well-structured essay on the transformative impact of AI on our understanding of language, the enduring value of refining human language skills, and the distinctions between human and AI-generated communication. You are encouraged to examine these issues through the lenses of literary studies, linguistics, language education, or other relevant fields. Feel free to include examples or personal experiences to enrich your discussion. (100 points)
