

國立成功大學
114學年度碩士班招生考試試題

編 號：183

系 所：交通管理科學系

科 目：統計學

日 期：0211

節 次：第 2 節

注 意：
1. 不可使用計算機
2. 請於答案卷(卡)作答，於試題上作答，不予計分。

※ 考生請注意：本試題不可使用計算機。請於答案卷(卡)作答，於本試題紙上作答者，不予計分。

1. (5%) Which of the following can be decided by a researcher? Choose all that apply.
 - a. Alpha level
 - b. Critical region
 - c. The probability (or risk) of a Type I error
 - d. A Type I error
 - e. The probability of a Type II error
 - f. A Type II error
 - g. p -value

2. (20%) A hotel company wants to know if employees' previous work experiences (years) affect their satisfaction with their current job at the hotel (score 1-10, the higher score indicates higher satisfaction with their job). The hotel asked 5 employees and obtained the data below (X = years of previous work experiences, Y = satisfaction)

| Employee | X | Y |
|----------|---|----|
| A | 0 | 4 |
| B | 2 | 1 |
| C | 8 | 10 |
| D | 6 | 9 |
| E | 4 | 6 |

- (a) Please compute the values for the regression equation (10%).
- (b) For an employee with 5 years work experience, how satisfied this employee might be? (10%)

3. (25%) Please explain the meanings and the usage for the following concepts clearly.
 - (a) When we say that a null hypothesis is rejected, what do we mean exactly? Please provide an example to illustrate your answer (10%).
 - (b) What is the meaning of standard deviation? (5%)
 - (c) If we have a sample data below:
1 2 3 4 5
Please calculate the unbiased estimate of the standard deviation (10%)

4. (25%) The government would like to understand whether income can affect people's intention to take public transportations. A survey was conducted by the government. There were 3 income groups and 5 participants per group included in the survey. Please see below for the result of the ANOVA table.

ANOVA

| Source | Sum of squares | df | Mean Square | F |
|---------|----------------|-----|-------------|-----|
| Between | (a) | (c) | 35 | (g) |
| Within | (b) | (d) | (f) | |
| Total | 118 | (e) | | |

- (a) Please provide the values for the missing entries (a)-(g) in the ANOVA table (14%).
- (b) Please use an analysis of variance with $\alpha = .05$ to determine whether there are any significant differences among the three income groups on their intention to take public transportations (4%).
- (c) Please calculate the effect size (η^2) for the data (4%).
- (d) What is the percentage of variance explained by income (3%)?

5. (25%) The bus company used an independent-measures design to compare gender differences on how many times they took the bus to school per year and obtained the data below. Four male and four female students participated in the study. In average, male students took the bus to school for 52 times per year and female students took the bus for 58 times.

| | Male | Female |
|-------------------------|------|--------|
| n (Total Sample Number) | 4 | 4 |
| M (Sample Mean) | 52 | 58 |
| SS (Sum of Squares) | 108 | 84 |

- (a) Please calculate the variance for each gender and compute the pooled variance (12%).
- (b) Please provide the estimated standard error and t-value (8%).
- (c) Do the data show a significant difference between gender? Please use a two-tailed test with $\alpha = .05$ (5%).

t Distribution: Critical Values of t

| <i>Degrees of freedom</i> | <i>Two-tailed test:</i> <i>One-tailed test:</i> | <i>Significance level</i> | | | | | | |
|---------------------------|--|---------------------------|--------|--------|--------|---------|---------|------|
| | | 10% | 5% | 2% | 1% | 0.5% | 0.2% | 0.1% |
| 5% | 2.5% | 1% | 0.5% | 0.1% | 0.05% | | | |
| 1 | | 6.314 | 12.706 | 31.821 | 63.657 | 318.309 | 636.619 | |
