

考試科目	統計學	系所別	財務管理學系	考試時間	2月6日(星期二)第四節
1.	(5 %) Which of the following visualizations is most appropriate and informative for exploring the distribution of the EPS (earnings per share) of a group of 500 companies?	A. Bar chart. B. Scatter plot. C. Histogram. D. Box-whisker plot.	選擇題請在答案卡上作答，否則不予計分。		
2.	(5 %) Given the annual rate of return of a stock in 5 consecutive years, which of the following is more appropriate measure for average rate of return?	A. Mean B. Median C. Mode D. Geometric mean			
3.	(5 %) Which of the following statements is incorrect?	A. A political poll is a random experiment. B. A census is not a random experiment. C. Given events A, B and their complements, $\sim A$ , $\sim B$ . Then $P(\sim A   \sim B) = 1 - P(A   B)$ . D. Suppose A and B are not zero-probability events. If they are independent, they are not disjoint.			
4.	(5 %) Which of the following statements is least correct?	A. If X follows a bi-modal distribution with finite mean and variance, Chebyshev's Theorem can be applied. B. If X follows a bi-modal distribution with finite mean and variance, Central Limit Theorem can be applied. C. If a sample of $n=30$ subjects is randomly drawn with replacement from a population of $N=100$ , the continuity correction is necessary when applying Normal approximation for probability of an event associating sample proportion. D. If a sample of $n=30$ is randomly drawn with replacement from a population of $N=100$ , the finite population correction factor is necessary.			
5.	(5 %) If based on a sample dataset, a statistical test rejects some $H_0$ at significance level 5%, which of the following statements associated with the data and the test is incorrect?	A. Type I error rate $\leq 5\%$ . B. Power = 95%. C. P-value $\leq 5\%$ . D. $H_0$ will be rejected at significance level 10%.			

考試科目	統計學	系所別	財務管理學系	考試時間	2月6日(星期二)第四節
------	-----	-----	--------	------	--------------

6. (5 %) Suppose one plan to conduct a survey to estimate the percentage of overweight adults. What is the minimal required sample size such that at 90% confidence level, the margin of sampling error is 3%?
- A. 752
  - B. 892
  - C. 1028
  - D. 1068
7. (5 %) Suppose in a random sample of 100 adults, 20 are overweight, find the 90% confidence interval of the population overweight proportion.
- A. [0.13, 0.27]
  - B. [0.11, 0.29]
  - C. [0.16, 0.24]
  - D. [0.19, 0.21]
8. (5 %) Consider the EPS of a sample of 4 companies (in USD). It's known that  $\bar{x} = 3.3, s = 1.6$ , the standard error of the mean is
- A. 0.5
  - B. 0.8
  - C. 1.6
  - D. 2.1
9. (5 %) (Cont. 8) Suppose EPS has a normal population distribution, find 90% confidence interval of population mean EPS.
- A. [-1.1, 7.7]
  - B. [1.1, 5.5]
  - C. [-0.5, 7.0]
  - D. [1.4, 5.2]
10. (5 %) Which of the followings does not imply a normal population distribution?
- A. The empirical rule holds.
  - B. The QQ plot is close to a straight line.
  - C. The histogram is unimodal and symmetric.
  - D. No data point appears outside the whisker in the box-whisker plot.

考試科目	統計學	系所別	財務管理學系	考試時間	2月6日(星期二)第四節
------	-----	-----	--------	------	--------------

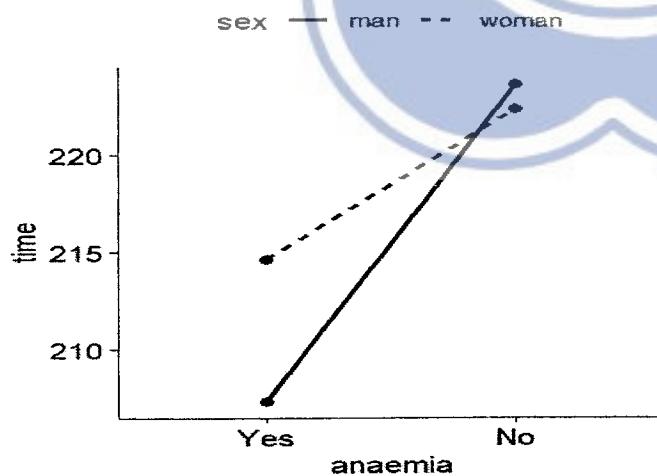

11. (5 %) Suppose that the P/E ratio of Software industry follows  $N(40, 25)$ , the P/E ratio of other industry follows  $N(20, 25)$ . Further, Software companies account for 10% of the total.  $P(P/E \text{ ratio} > 30) = ?$

- A. 0.094
- B. 0.109
- C. 0.118
- D. 0.128

12. (5 %) (Cont. 11) If it is known that the P/E ratio of company A is greater than 30, what is the probability that A is a Software company?

- A. 0.69
- B. 0.72
- C. 0.77
- D. 0.83

13. (5 %) In a sample data of 45 heart failure patients, there are three variables: time is the survival time (days) of the patient; sex is the gender of the patient; anaemia: whether the patient has anaemia. The following is the interaction plot, in which the Y-axis gives each group's mean survival time. What does it reveal in the plot?

- A. All the two main effects and interaction are likely significant.
- B. Only the two main effects are likely significant.
- C. Only the main effect anaemia is likely significant.
- D. Only the main effect sex is likely significant.

考試科目	統計學	系所別	財務管理學系	考試時間	2月6日(星期二)第四節
------	-----	-----	--------	------	--------------

14. (5 %) (Cont. 13) Regardless of the previous findings, we consider the data analysis of a two-way ANOVA with interaction term. From a sample data of 45 heart failure patients, it's provided that  $SS(\text{anaemia})=110$ ,  $SS(\text{sex})=40$ ,  $SS(\text{total})=700$  and  $MSE=12$ . The F-value of the interaction is around

- A. 3
- B. 5
- C. 7
- D. 9

15. (5 %) The following are the EPS of a sample of 9 companies in year 2022, 2023 (in USD). Assume that EPS follows Normal distributions.

Company	Year 2022 (X)	Year 2023 (Y)
A	1.8	1.7
B	1.9	1.9
C	2.0	2.4
D	2.1	2.0
E	2.2	2.2
F	2.3	2.7
G	2.4	2.3
H	2.5	2.5
I	2.6	2.6
Sample mean	2.2	2.26
Sample variance	0.075	0.113

Which of the following tests is appropriate to test whether EPS increases in 2023?

- A. One-sample t-test
- B. Paired t-test
- C. Two-sample t-test
- D. Two-sample z-test

16. (5 %) (Cont. 15) To determine whether EPS increases, the observed test statistic is approximately

- A. 0.4 (or -0.4)
- B. 0.6 (or -0.6)
- C. 0.8 (or -0.8)
- D. 1.0 (or -1.0).

考試科目	統計學	系所別	財務管理學系	考試時間	2月6日(星期二)第四節
------	-----	-----	--------	------	--------------

17. (5%) (Cont. 15) For the EPS data in Question 15, the followings are partial output of the simple linear regression model:  $EPS_{2023} = \alpha + \beta \times EPS_{2022} + \epsilon$ .

Coefficients:

	Estimate	Std. Error	t value	Pr(> t )
(Intercept)	0.09222	0.61	[REDACTED]	0.88
x	[REDACTED]	0.27	[REDACTED]	0.01

Residual standard error: 0.21 on 7 degrees of freedom

The slope estimate is

- A. 0.8
- B. 0.9
- C. 1.0
- D. 1.1

18. (5%) (Cont. 17) To test the linear effect of  $EPS_{2022}$  on  $EPS_{2023}$ , within which range does the p-value lie?

- A. p-value < 0.01
- B. 0.01 < p-value < 0.05
- C. 0.05 < p-value < 0.10
- D. 0.10 < p-value

19. (5%) (Cont. 17) The adjusted  $R^2$  is around

- A. 0.6
- B. 0.7
- C. 0.8
- D. 0.9

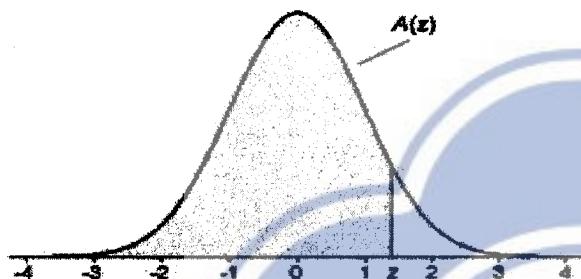

20. (5%) In multiple linear regression, what do multicollinearity refer to?

- A. A strong correlation among independent variables.
- B. A strong correlation between dependent variable and only some independent variable.
- C. A strong correlation among observations.
- D. A strong correlation among residuals.

Appendix:

Cumulative Standardized Normal Distribution

$A(z)$  is the integral of the standardized normal distribution from  $-\infty$  to  $z$  (in other words, the area under the curve to the left of  $z$ ). It gives the probability of a normal random variable not being more than  $z$  standard deviations above its mean. Values of  $z$  of particular importance:

$z$	$A(z)$	
1.645	0.9500	Lower limit of right 5% tail
1.960	0.9750	Lower limit of right 2.5% tail
2.326	0.9900	Lower limit of right 1% tail
2.576	0.9950	Lower limit of right 0.5% tail
3.090	0.9990	Lower limit of right 0.1% tail
3.391	0.9995	Lower limit of right 0.05% tail

$z$	0.00	0.01	0.02	0.03	0.04	0.05	0.06	0.07	0.08	0.09
