

※ 考生請注意：本試題不可使用計算機

1. (50 %) The closed-loop transfer function of the system is

$$\frac{Y(s)}{U(s)} = \frac{(s-1)}{(s^3 + 2s^2 - s - 2)}$$

- a. Can you check its controllability or observability from above information? Why? (10 points)
- b. Realize the system to be a controllable canonical form dynamic equation. (10 points)

$$\dot{x}(t) = Ax(t) + Bu(t)$$

$$y(t) = Cx(t)$$

- c. One claims that the dynamic equation of (b) is unobservable system. Is he or she correct? Why? (5 points)
- d. Using state feedback $u(t) = r(t) + Kx(t)$ to relocate the eigenvalues of dynamic equation of (b) to be -1, -1, -1. (10 points)
- e. How to check the stability of the system from the transfer function of a system? (5 points)
- f. Realize the system to be Jordan form dynamic equation (10 points)

$$\dot{x}(t) = Ax(t) + Bu(t)$$

$$y(t) = Cx(t)$$

2. (20%) Please explain how to define the following:

- a. Relaxed system (5 points)
- b. Linear system (5 points)
- c. Causal system (5 points)
- d. Time invariant system (5 points)

(背面仍有題目,請繼續作答)

系所組別： 生物醫學工程學系乙組

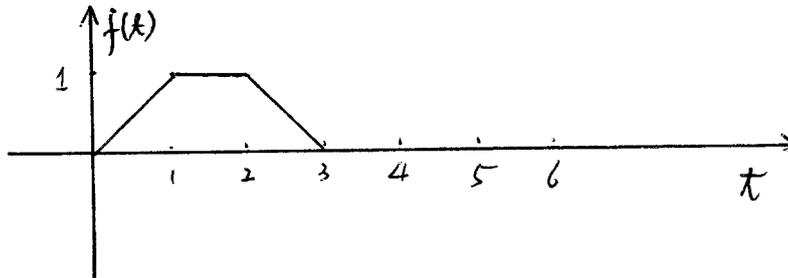

考試科目： 控制工程

考試日期： 0223，節次： 2

※ 考生請注意：本試題不可使用計算機

3. (15%) Three different systems can be described as (a) s (b) $\frac{1}{s}$ (c) e^{-s} .

The signal $f(t)$ is described as following :

If the signal $f(t)$ passing through above systems, please plot the output signals, respectively. (5 points each)

4. (15%) Explain the following terminologies;
- Analog&Digital signals (3 points)
 - Continuous&discrete signals (3 points)
 - A/D &D/A conversion (3 points)
 - PID controller (3 points)
 - Variable Structure System(VSS) (3 points)
