考試日期：0301，節次：2

1. (20%) Consider the Bode magnitude plot of a plant  $G(s)$  shown in Figure 1, where no poles or zeros are located in the RHP. Please determine the transfer function  $G(s)$  if  $|G(j0.01)| = 50000$ ,  $|G(j1)| = 0.1040$ ,  $|G(j5)| = 45.1160$ ,  $|G(j20)| = 0.0140$ , and  $|G(j100)| = 15.0360$ .
2. (10%) For a standard 2nd-order system, the closed-loop transfer function is  $F(s) = \frac{25}{s^2 + 2s + 25}$ . Please derive and determine the peak resonant  $M_p$  and bandwidth  $\omega_{BW}$ .
3. (20%) Please show that all eigenvalues of  $A$  have negative real parts if and only if for any given positive definite symmetric matrix  $N$ , the Lyapunov equation  $A^T M + M A = -N$  has a unique positive symmetric solution  $M$  and  $M$  is positive.
- (Hint:  $M = \int_0^\infty e^{At} N e^{A^T t} dt$ )

4. (10%) Determine  $\Phi(s)$  and  $\Phi(t)$  for the system with  $\dot{\mathbf{x}} = \begin{bmatrix} -1 & 0 \\ 4 & -3 \end{bmatrix} \mathbf{x} + \begin{bmatrix} 3 \\ 5 \end{bmatrix} u$ .

5. (20%) Design an op-amp controller to realize the following phase-lead transfer function:  $G_c(s) = (s + 1)/(s + 4)$ .

6. (20%) A unity negative feedback control system has the plant transfer function

$$G(s) = \frac{K(s + 1)}{s^3 + \alpha s^2 + 2s + 1}$$

Find the values of  $K$  and  $\alpha$  so that this system oscillates at a frequency 2 rad/sec.
