編號: 97-1 國立成功大學九十七學年度碩士班招生考試試題

科目:動力學

本試題是否可以使用計算機: ②可使用 、 □不可使用 (請命題老師勾選)

系所:機械工程學系乙、戊組

考試日期:0301、節次:2

共子 頁 第/頁

Problem 1. (20 Points) A small sphere B of mass m is released from rest in the position shown in Figure 1 and swings freely in a vertical plane, first about O and then about the peg A after the cord comes in contact with the peg. Please determine the tension in the cord (a) just before the sphere comes in contact with the peg, (b) just after it comes in contact with the peg. In both cases, please draw the corresponding free-body diagram before making any computation. Without the free-body diagram, you will not be able to obtain any credits.

Figure 1

Problem 2. (20 Points) Consider the system shown in Figure 2.

- (a) Is the system a conservative system? Why? (4 Pts)
- (b) Please define your own variable and express the kinetic energy and potential energy of this system (8 pts)
- (c) Please find the equation of motion and its natural frequency (8 pts)

Figure 2

(背面仍有題目,請繼續作答)

Problem 3. (20 Points) As shown in Figure 3, a disk rolls without slipping such that it has an angular acceleration of  $\alpha = 4 \text{ rad/s}^2$  and angular velocity of  $\omega = 2 \text{ rad/s}$ at the instance shown. Determine the accelerations of point A and B on the link and the link's angular acceleration.

(20 Points) As shown in Figure 4, a slender 100-kg bar is supported Problem 4. by two cords AB and AC. If cord AC suddenly breaks, determine the initial angular acceleration of the bar and the tension in cord AB.

本試題是否可以使用計算機:「以可使用」「一不可使用」(請命題老師勾選)

考試日期:0301,節次:2

Problem 5. (20 Points) As shown in Figure 5, a horizontal rigid rod is dropped from a height 10 ft above a heavy table. The end of the rod collides with the table. If the coefficient of impact, e, between the end of the rod and the corner of the table is 0.6, what is the angular velocity of the rod right after the impact? The rod is 1 ft in length and weight 1.5 lb.
