

考試科目	計算機數學(一)所	別	資科所	考試時間	4月20日上下午第1節 星期日
------	-----------	---	-----	------	--------------------

## 離散數學部分 (60 %)

## I 選擇與填充 (34 %; 不倒扣)

1. (4%) How many zeros are there at the end of the decimal representation of  $400!$  ?
  - (a) 80 (b) 96 (c) 99 (d) 100
2. (4%) How many Boolean functions are there with 4 inputs ?
  - (a)  $2^4$  (b)  $2^8$  (c)  $2^{16}$  (d)  $2^{32}$
3. (4%) Which of the following well-formed formulas is not valid under the usual arithmetic interpretation?
  - (a)  $1 \neq 1 \rightarrow 2 = 3$
  - (b)  $(1 = 1 \rightarrow 2 = 2) \leftrightarrow (2 \neq 2 \rightarrow 1 \neq 1)$
  - (c)  $(\exists x \forall y p(x,y)) \rightarrow \forall y \exists x p(x,y)$
  - (d)  $(\forall x \exists y p(x,y)) \rightarrow \exists y \forall x p(x,y)$
4. (4%) Which of the following languages is *not* regular? Where A and B are two arbitrary regular languages,
  - (a)  $\{ a^n b^n \mid n \geq 0 \}$
  - (b)  $A - B$
  - (c)  $\{ x \mid \exists y \text{ with } xy \in A \text{ and } |x|=|y| \}$
  - (d)  $\{ a^{f(n)} \mid f(n) = n^2 + n + 1 \text{ and } n \geq 0 \}$
5. (4%) Consider the program  $S = \{ x = x + y; \quad y = (y > 0 ? x : -x); \}$ . Suppose after the execution of the program the postcondition “ $x > y$ ” holds, then which of the following conditions must be true before the execution of S ?
  - (a)  $y < 0$  (b)  $x > 0$  (c)  $x + y \geq 0$  (d)  $x = y$
6. (4%) Suppose  $f$  is an increasing function satisfying the divide-and-conquer relation  $f(n) = 3f(n/2) + 2n$  and the initial condition  $f(1) = 0$ . What is the asymptotic order of  $f(n)$  ?
  - (a)  $\Theta(n^3)$  (b)  $\Theta(n^3 \lg n)$  (c)  $\Theta(n^{\lg 3})$  (d)  $\Theta(n^2)$
7. (10 %) Suppose that a full 4-ary tree has 27 internal vertices.
  - (a) How many leaves does it have ? [4%]
  - (b) What is the smallest height it could possibly have ? [4%]
  - (c) What is the largest height it could possibly have ? [2%]

Note: Single-vertex tree is defined to have height 0.

------	------------	-----	------	--------------------

## 離散數學部分

## II 計算與證明 (26 %)

8. (6%) Solve the recurrence relation  $a_n = 4 a_{n-1} + 3 a_{n-2}$  with the initial conditions  $a_0 = 3$  and  $a_1 = 13$ .
9. (10%) We call a positive integer *perfect* if it equals the sum of all its positive devisors other than itself.
- (a) Find a perfect number in the range (20,30). [3%]
  - (b) Show that if  $2^p - 1$  is prime, then  $2^{p-1}(2^p - 1)$  is perfect. [7%]
10. (10%) Let A be an infinite set and N the set of all non-negative integers. Show that if there is an onto mapping from N to A, then there must exist a 1-1 and onto mapping (bijection) from A to N.

------	------------------	----	------	------	--------------	-----	---

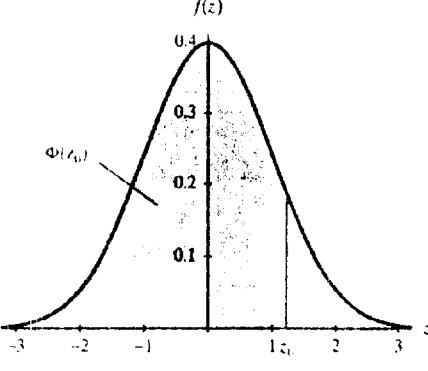

- (9) 1. A die is loaded in such a way that an even number is twice as likely to occur as an odd number. If this die is rolled once, what is the probability that the outcome will be 1 or 2?
- (9) 2. A random variable  $X$  has a mean  $\mu = 10$  and a variance  $\sigma^2 = 16$ . Using Chebyshev's theorem, find
- $P(|X-10| \geq 8)$ ;
  - $P(0 < X < 20)$ ;
  - the value of the constant  $c$  such that  $P(|X-10| \geq c) \leq 0.01$ .
- (10) 3. A soft-drink machine is regulated so that it discharges an average of 100 milliliters per cup. If the amount of drink is normally distributed with a standard deviation equal to 10 milliliters,
- what fraction of the cups will contain more than 113.5 milliliters?
  - what is the probability that a cup contains between 93.5 and 120.5 milliliters?
  - how many cups will probably overflow if 125 milliliters cups are used for the next 10,000 drinks?
  - below what value do we get the smallest 10% of the drinks?
- (10) 4. A bank has an average of 12 customers between 9:00 am to 12:00 noon. Customers arrive according to a Poisson distribution.
- What is the probability that the time between consecutive arrivals (customers) will fall between six and fifteen minutes?
  - What is the expected time between the arrivals of the next two customers (in minutes)?
