## 國立高雄大學 107 學年度研究所碩士班招生考試試題

系所：化學工程及材料工程學系

## 科目：普通化學

考試時間：100 分鐘
（無組別）
本科原始成績：100分

是否使用計算機：是

1．In the reaction of $\mathrm{N}_{2}$ and $\mathrm{H}_{2}$ to form $\mathrm{NH}_{3}$ ，suppose 25.0 g of nitrogen and 5.00 g of hydrogen are mixed and reacted to form ammonia．If this reaction is run to completion，which is the limiting reactant？How many grams of $\mathrm{NH}_{3}$ will be formed？If 16.8 g of $\mathrm{NH}_{3}$ is actually produced，what is the percent yield of ammonia？（atomic mass： $\mathrm{N}, 14.01 ; \mathrm{H}, 1.008$ ）（ $8 \%$ ）
2．Write Lewis structures and predict the molecular structures of $\mathrm{I}_{3}{ }^{-}, \mathrm{BF}_{3}$ ，and $\mathrm{SO}_{2}$ ．Which of these compounds are polar？（12\％）
3．Use the molecular orbital model to write the electron configuration，magnetism and bond order of $\mathrm{P}_{2}$ ．（7\％）
4．Draw all resonance structures for $\mathrm{OCN}^{-}$（carbon is the central atom）．Which resonance structure is the most stable one？Explain why．（9\％）
5．Write the formula for each compound：（ $5 \%$ ）
（a）gallium bromide（b）aluminum oxide（c）potassium hypochlorite（d）sulfur hexafloride（e） phosphoric acid
6．Draw a plot to show vapor pressure for a solution of two volatile liquids，for which $\mathrm{P}_{\text {total }}$ is larger than the value calculated from Raoult＇s law．Give an example of such kind of volatile liquids．（8\％）
7．For a nuclear equation ${ }_{86}^{222} \mathrm{Rn} \longrightarrow{ }_{84}^{218} \mathrm{Po}+$ ？，what is the missing particle？If this reaction follows first－order law and rate constant $\mathrm{k}=0.181$ days $^{-1}$ ．If you begin with 5.28 g pure ${ }_{86}^{222} \mathrm{Rn}$ ， how much will be left after 1.96 days ？$\left(e^{0.181}=1.20,(1.20)^{1.96}=1.43\right)(8 \%)$
8．For the chlorine oxyacids，place the oxyacids in the order of increasing acid strength．How does acid strength relate with the number of attached oxygens on the chlorine？Explain why．（8\％）
9．Draw the pH （vs．volume of NaOH added）curve for（a）titration of HCl with NaOH and（b） titration of $\mathrm{CH}_{3} \mathrm{COOH}$ with NaOH ．For the indicator of methyl red（useful pH range is 4．2－6．2）， is it suitable in both cases？If not，please explain why．（8\％）
10．Identify the most important types of interparticle forces present in the solids of each of the following substances．（8\％）
a． $\mathrm{CO}_{2}$
b．HF
c． $\mathrm{C}_{2} \mathrm{H}_{6}$
d． $\mathrm{CaCl}_{2}$

11．Calculate the $\left[\mathrm{H}^{+}\right]$of a 1.0 L solution that contains $0.40 \mathrm{M} \mathrm{CH}_{3} \mathrm{COOH}\left(\mathrm{K}_{\mathrm{a}}=1.8 \times 10^{-5}\right)$ and 0.60 $\mathrm{M} \mathrm{CH}_{3} \mathrm{COONa}$ ．Then，calculate the $\left[\mathrm{H}^{+}\right]$of the solution after the addition of 0.010 mole of solid NaOH ？（10\％）
12．Describe the cell based on the following half－reactions：（9\％）

$$
\begin{aligned}
& \mathrm{Al}^{3+}{ }_{(\mathrm{aq})}+3 \mathrm{e}^{-} \rightarrow \mathrm{Al}_{(\mathrm{s})} \quad \varepsilon^{0}=-1.66 \mathrm{~V} \\
& \mathrm{Mn}^{2+}{ }_{(\mathrm{aq})}+2 \mathrm{e}^{-} \rightarrow \mathrm{Mn}_{(\mathrm{s})} \quad \varepsilon^{0}=-1.18 \mathrm{~V}
\end{aligned}
$$

Where $\quad \mathrm{T}=25^{\circ} \mathrm{C},\left[\mathrm{Mn}^{2+}\right]=0.50 \mathrm{M},\left[\mathrm{Al}^{3+}\right]=1.00 \mathrm{M}$
Write the balanced cell reaction and calculate the cell potential at $25^{\circ} \mathrm{C}(\log 2=0.301)$ ．
